Uppsala Multidisciplinary Center for Advanced Computational Science

<http://www.uppmax.uu.se>

computer clusters:

- Rackham, 600 nodes à 20 cores (128 and 512 GB RAM)
- Bianca, 200 nodes à 16 cores (128GB RAM) - virtual cluster

(Milou, 208 computers à 16 cores (128GB RAM) - decommissioned but hardware will soon find new use

>12 PB fast parallel **storage**

Jobs and queuing systems

How to use the resources of UPPMAX

How to use the resources of UPPMAX in a good way!
Efficiency!!!

UPPMAX provides its resources via

projects

Resources:

compute
(core-hours/month)

storage
(GB/TB)

two separate projects:

SNIC project:

cluster **Rackham**

2000 core-hours/month

128 GB

Uppstore project:

storage system **CREX**

1 - 100 TB

SNAC Small UPPMAX, 2018

This Round is Open for Proposals

This round is for compute resources on Rackham. All research areas are welcome. Projects with a large storage requirement are prioritised on Rackham.

More information about this round is available at <http://snic.se/allocations/small-allocations/>.

This round is open for proposals until 2019-01-01 00:00.

Create New Proposal for SNAC Small UPPMAX, 2018

View Committee Overview

Resources

	Resource	Centre	Available	Capacity	Unit	Note
▶	Crex 1	UPPMAX	500	GiB		
▶	Rackham	UPPMAX	1 000	x 1000 core-h/month		

Click the ▶ to show more information about the resource.

What is UPPMAX what it provides

Projects at UPPMAX

How to access UPPMAX

Jobs and queuing systems

How to use the resources of UPPMAX

How to use the resources of UPPMAX in a good way!
Efficiency!!!

How to access UPPMAX

SSH to a cluster

```
ssh -Y your_username@cluster_name.uppmax.uu.se
```

[illegible]

Local
computer

Login
nodes

Computation
nodes

Login nodes

use them to access UPPMAX

never use them to run **jobs**

don't even use them to do "quick stuff"

Calculation nodes

do your work here - testing and running

Calculation nodes

not accessible directly

SLURM (queueing system) gives you access

Job (computing)

From Wikipedia, the free encyclopedia

For other uses, see [Job \(Unix\)](#) and [Job stream](#).

In [computing](#), a **job** is a unit of work or unit of execution (that performs said work). A component of a job (as a unit of work) is called a *[task](#)* or a *[step](#)* (if sequential, as in a [job stream](#)). As a unit of execution, a job may be concretely identified with a single [process](#), which may in turn have subprocesses ([child processes](#); the process corresponding to the job being the [parent process](#)) which perform the tasks or steps that comprise the work of the job; or with a [process group](#); or with an abstract reference to a process or process group, as in [Unix job control](#).

Read/open files

Do something with the data

Print/save output

Read/open files

Do something with the data

Print/save output

Standard way of running jobs

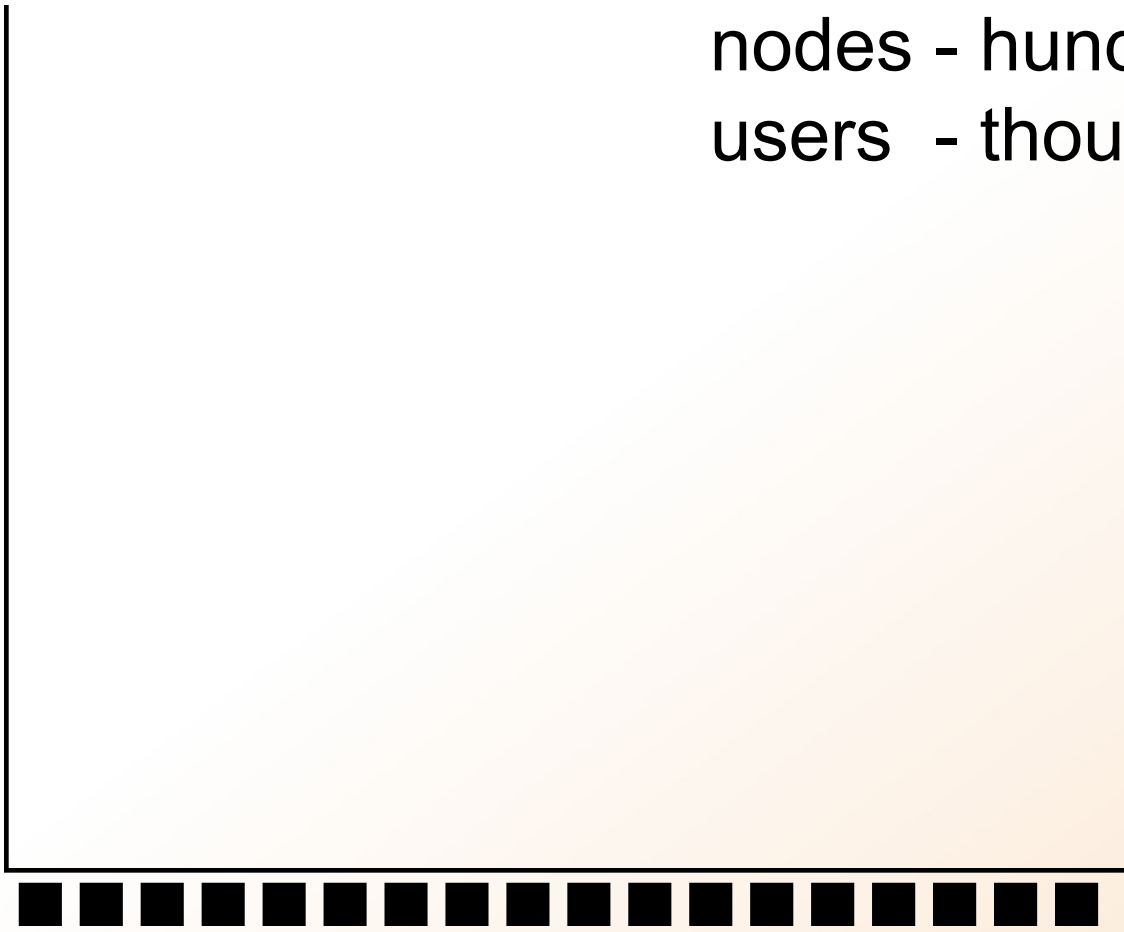

Parallel computing

Queue System

More users than nodes
Need for a queue

nodes - hundreds
users - thousands

More users than nodes
Need for a queue

More users than nodes
Need for a queue

More users than nodes
Need for a queue

queue system
workload manager
job queue
batch queue
job scheduler

SLURM (Simple Linux Utility for Resource Management)
free and open source

What is UPPMAX what it provides

Projects at UPPMAX

How to access UPPMAX

Jobs and queuing systems

How to use the resources of UPPMAX

How to use the resources of UPPMAX in a good way!
Efficiency!!!

- 1) Ask for resource and run jobs manually**
mainly for testing and small jobs
- 2) Write a script and submit it to SLURM**
do the real job

1) Ask for resource and run jobs manually

submit a request for resources

ssh to a calculation node

run programs

1) Ask for resource and run jobs manually submit a request for resources

```
salloc -A b2015245 -p core -n 1 -t 00:05:00
```

salloc - command

mandatory job parameters:

- A** - project ID (who “pays”)
- p** - node or core (the type of resource)
- n** - number of nodes/cores
- t** - time

- A** project ID
you have to be a member
- p** 1 node = 16 cores
1 hour walltime = 16 core-hours
- n** number of cores (default value = 1)
- N** number of nodes
- t** format - hh:mm:ss
default value= 7-00:00:00
jobs killed when time limit reaches - always overestimate ~ 50%

Information about your jobs

`squeue -u <user>`

```
[valent@milou2 valent]$ squeue -u valent
```

JOBID	PARTITION	NAME	USER	ST	TIME	NODES	NODELIST(REASON)
11334919	core	sh	valent	R	0:11	1	m164

SSH to a calculation node (from a login node)

```
ssh -Y <node_name>
```

```
[[valent@milou2 valent]$ salloc -A b2015245 -p core -n 1 -t 00:05:00 &
[2] 10994
```

```
[[valent@milou2 valent]$ salloc: Granted job allocation 11334919
```

```
[[valent@milou2 valent]$ squeue -u valent
```

JOBID	PARTITION	NAME	USER	ST	TIME	NODES	NODELIST(REASON)
11334919	core	sh	valent	R	0:11	1	m164

```
[[valent@milou2 valent]$ ssh -Y m164
```

_ \ _ \ \ / / \ \ \ / /	System:	m164
)) \ / / _ \ \ /	User:	valent

\ _ _ / _ _ _ / _ \ \ / \ _ \	Queue:	0 pending

#####

User Guides: <http://www.uppmax.uu.se/support/user-guides>

FAQ: <http://www.uppmax.uu.se/support/faq>

Write to support@uppmax.uu.se, if you have questions or comments.

```
[[valent@m164 ~]$ █
```

You can run programs now!

2)Write a script and submit it to SLURM

put all commands in a text file - script

tell SLURM to run the script
(use the same job parameters)

2) Write a script and submit it to SLURM

put all commands in a text file - script

```
#!/bin/bash -l  
#SBATCH -A g2012157  
#SBATCH -p core  
#SBATCH -J Template_script  
#SBATCH -t 08:00:00
```

job parameters

```
# go to some directory  
cd ~/glob
```

```
# do something  
echo Hello world!
```

tasks to be done

2) Write a script and submit it to SLURM

put all commands in a text file - script

```
#!/bin/bash -l
#SBATCH -A g2012157
#SBATCH -p node
#SBATCH -J Template_script
#SBATCH -t 08:00:00
```

```
# go to the correct directory
cd /home/dahlo/glob/work/uppmaxScripts/misc

# run tophat on the data, using 8 cores
tophat -p 8 /bubo/proj/g2012157/indexes/bowtie/hg19 tophat/input/ad12.fq
```

2)Write a script and submit it to SLURM

tell SLURM to run the script
(use the same job parameters)

```
sbatch test.sbatch
```

2) Write a script and submit it to SLURM

tell SLURM to run the script
(use the same job parameters)

```
sbatch test.sbatch
```

sbatch - command

test.sbatch - name of the script file

2) Write a script and submit it to SLURM

tell SLURM to run the script
(use the same job parameters)

```
sbatch -A b2015245 -p core -n 1 -t 00:05:00 test.sbatch
```

Prints to a file instead of terminal slurm-<job id>.out

```
[valent@milou2 temp]$ ll
total 32
-rw-rw-r-- 1 valent valent 209 Oct 22 13:34 test.sbatch
[valent@milou2 temp]$ sbatch test.sbatch
Submitted batch job 11334939
[valent@milou2 temp]$ ll
total 64
-rw-rw-r-- 1 valent valent 31 Oct 22 13:35 slurm-11334939.out
-rw-rw-r-- 1 valent valent 209 Oct 22 13:34 test.sbatch
[valent@milou2 temp]$ cat slurm-11334939.out
this goes to slurm-<jobID>.out
[valent@milou2 temp]$ cat test.sbatch
#!/bin/bash -l

#SBATCH -A b2015245
#SBATCH -p core
#SBATCH -n 1
#SBATCH -t 00:05:00

# go to dir work
cd ~/work
# do something useless
echo "this goes to slurm-<jobID>.out"
echo "Hello, world!" > hello.txt
[valent@milou2 temp]$
```

Shows information about your jobs

`squeue -u <user>`

```
[valent@milou2 temp]$ sbatch test.sbatch
Submitted batch job 11334948
[valent@milou2 temp]$ squeue -u valent
```

JOBID	PARTITION	NAME	USER	ST	TIME	NODES	NODELIST(REASON)
11334948	core	test.sba	valent	CG	0:01	1	m200

`jobinfo -u <user>`

SLURM user guide

go to <http://www.uppmax.uu.se/>

click User Guides (left-hand side menu)

click Slurm user guide

or just google “uppmax slurm user guide”

link:

<http://www.uppmax.uu.se/support/user-guides/slurm-user-guide/>

100+ programs installed

Managed by a 'module system'

Installed, but hidden

Manually loaded before use

module avail - Lists all available modules

module load <module name> - Loads the module

module unload <module name> - Unloads the module

module list - Lists loaded modules

module spider <word> - Searches all modules after 'word'

```
[dahlo@kalkyl4 work]$ module load bioinfo-tools
[dahlo@kalkyl4 work]$ module avail
```

Take-home messages

- The difference between **user account** and **project**
- **Login nodes** are not for running jobs
- SLURM gives you access to the **compute nodes** when you specify a project that you are member of
- Use **interactive** for quick jobs and for testing
- Do not ask for more **resources (cores/nodes)** than your job can actually use
- A job **script** usually consists of:
 - Job settings (-A, -p, -n, -t)
 - Modules to be loaded
 - Bash code to perform actions
 - Run a program, or multiple programs
