Valentin Georgiev

[valentin.georgiev@icm.uu.se](mailto:valentin.georgiev@icm.uu.se)

Enabler for Life Sciences

**What is UPPMAX what it provides**

Projects at UPPMAX

How to access UPPMAX

Jobs and queuing systems

How to use the resources of UPPMAX

How to use the resources of UPPMAX in a good way!  
**Efficiency!!!**

## Uppsala Multidisciplinary Center for Advanced Computational Science

<http://www.uppmax.uu.se>

### 3 clusters

Milou, 208 computers à 16 cores (128GB RAM)

17 with 256, 17 with 512 - until end of 2017

Rackham, 334(600) computers à 20 cores (128GB RAM)

Bianca, 200 nodes à 16 cores (128GB RAM)

~12 PB fast parallel storage

Bioinformatics software

# The basic structure of supercomputer

node = computer

UPPMAX provides

**Compute and Storage**

**What is UPPMAX what it provides**

**Projects at UPPMAX**

How to access UPPMAX

Jobs and queuing systems

How to use the resources of UPPMAX

How to use the resources of UPPMAX in a good way!  
**Efficiency!!!**

UPPMAX provides its resources via

projects

Resources:

**compute**  
(core-hours/month)

**storage**  
(GB)

before - UPPNEX projects:

cluster **Milou**

**2000** core-hours/month

**1 TB**

This course's project ID: g2017024

now - two separate projects:

SNIC project:

cluster **Rackham**

**2000** core-hours/month

**128 GB**

Scilifelab Storage project:

storage system **CREX**

**1 - 100 TB**

**What is UPPMAX what it provides**

**Projects at UPPMAX**

**How to access UPPMAX**

Jobs and queuing systems

How to use the resources of UPPMAX

How to use the resources of UPPMAX in a good way!  
**Efficiency!!!**

# How to access UPPMAX

SSH to a cluster

```
ssh -Y your_username@cluster_name.uppmax.uu.se
```

[illegible]

# SSH to Rackham

```
VG-MBP:~ valentinggeorgiev$ ssh -Y valent@rackham.uppmass.uu.se
Last login: Sun Oct 22 10:14:21 2017 from host-95-195-196-83.mobileonline.telia.com
```

[illegible]

#####

User Guides: <http://www.uppmax.uu.se/support/user-guides>

FAQ: <http://www.uppmax.uu.se/support/faq>

Write to [support@uppmax.uu.se](mailto:support@uppmax.uu.se), if you have questions or comments.

```
[valent@rackham1 ~]$
```

Local  
computer

Login  
nodes

Computation  
nodes

## Login nodes

use them to access UPPMAX

never use them to run **jobs**

don't even use them to do "quick stuff"

## Calculation nodes

do your work here - testing and running

## Calculation nodes

not accessible directly

SLURM (queueing system) gives you access

**What is UPPMAX what it provides**

# Job (computing)

From Wikipedia, the free encyclopedia

*For other uses, see [Job \(Unix\)](#) and [Job stream](#).*

In [computing](#), a **job** is a unit of work or unit of execution (that performs said work). A component of a job (as a unit of work) is called a [task](#) or a *step* (if sequential, as in a [job stream](#)). As a unit of execution, a job may be concretely identified with a single [process](#), which may in turn have subprocesses ([child processes](#); the process corresponding to the job being the [parent process](#)) which perform the tasks or steps that comprise the work of the job; or with a [process group](#); or with an abstract reference to a process or process group, as in [Unix job control](#).

## The basic structure of a supercomputer

Parallel computing is key  
Not one super fast

## The basic structure of a supercomputer

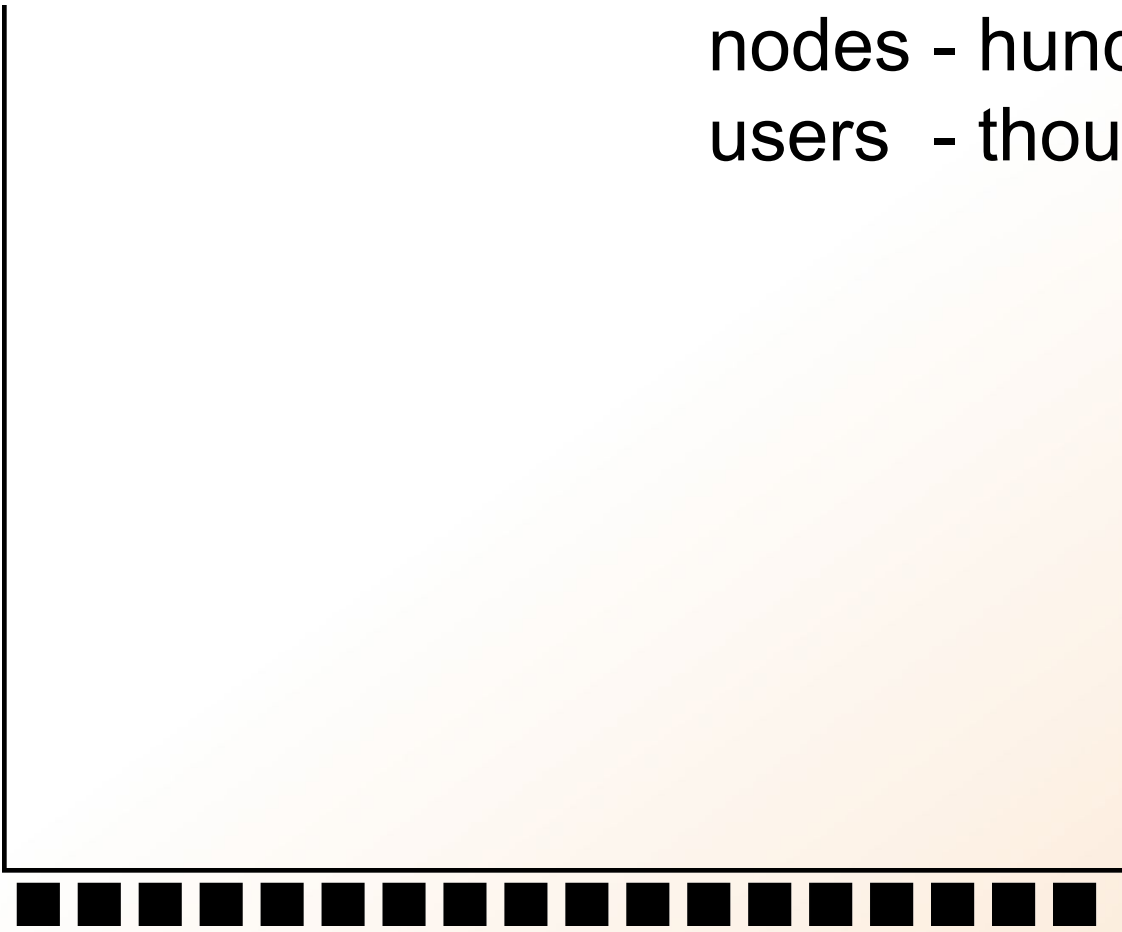

Parallel computing is key  
Not one super fast

# Queue System

More users than nodes  
Need for a queue

nodes - hundreds  
users - thousands

More users than nodes  
Need for a queue

More users than nodes  
Need for a queue

More users than nodes  
Need for a queue

**workload manager**  
**job queue**  
**batch queue**  
**job scheduler**

**SLURM** (Simple Linux Utility for Resource Management)  
free and open source

**What is UPPMAX what it provides**

**Projects at UPPMAX**

**How to access UPPMAX**

**Jobs and queuing systems**

**How to use the resources of UPPMAX**

How to use the resources of UPPMAX in a good way!  
**Efficiency!!!**

- 1) Ask for resource and run jobs manually**  
mainly for testing and small jobs
- 2) Write a script and submit it to SLURM**  
do the real job

## 1) Ask for resource and run jobs manually

submit a request for resources

ssh to a calculation node

run programs

## 1) Ask for resource and run jobs manually

```
salloc -A b2015245 -p core -n 1 -t 00:05:00
```

**salloc** - command

mandatory job parameters:

- A** - project ID (who “pays”)
- p** - node or core (the type of resource)
- n** - number of nodes/cores
- t** - time

- A**      this course project g2017024  
you have to be a member
- p**      1 node = 16 cores  
1 hour walltime = 16 core-hours
- n**      number of cores (default value = 1)
- N**      number of nodes
- t**      format - hh:mm:ss  
default value= 7-00:00:00  
jobs killed when time limit reaches - always overestimate ~ 50%

## Information about your jobs

`squeue -u <user>`

```
[valent@milou2 valent]$ squeue -u valent
```

JOBID	PARTITION	NAME	USER	ST	TIME	NODES	NODELIST(REASON)
11334919	core	sh	valent	R	0:11	1	m164

```
[valent@milou2 valent]$ salloc: Granted job allocation 11334919
```

JOBID	PARTITION	NAME	USER	ST	TIME	NODES	NODELIST(Reason)
11334919	core	sh	valent	R	0:11	1	m164

[illegible]

FAQ: <http://www.uppmax.uu.se/support/faq>

```
[valent@m164 ~]$
```

SSH to a calculation node (from a login node)

```
ssh -Y <node_name>
```

```
interactive -A b2015245 -p core -n 1 -t 00:05:00
```

```
System:      m1
User:        valent
Jobs:        1 running
Queue:       0 pending
```

#####

```
[valent@m1 valent]$
```

## **2)Write a script and submit it to SLURM**

put all commands in a text file - script

tell SLURM to run the script  
(use the same job parameters)

## 2) Write a script and submit it to SLURM

put all commands in a text file - script

```
#!/bin/bash -l  
#SBATCH -A g2012157  
#SBATCH -p core  
#SBATCH -J Template_script  
#SBATCH -t 08:00:00
```

job parameters

```
# go to some directory  
cd ~/glob  
  
# do something  
echo Hello world!
```

tasks to be done

## 2) Write a script and submit it to SLURM

put all commands in a text file - script

```
#!/bin/bash -l
#SBATCH -A g2012157
#SBATCH -p node
#SBATCH -J Template_script
#SBATCH -t 08:00:00
```

```
# go to the correct directory
cd /home/dahlo/glob/work/uppmaxScripts/misc

# run tophat on the data, using 8 cores
tophat -p 8 /bubo/proj/g2012157/indexes/bowtie/hg19 tophat/input/ad12.fq
```

## **2)Write a script and submit it to SLURM**

tell SLURM to run the script  
(use the same job parameters)

```
sbatch test.sbatch
```

## 2) Write a script and submit it to SLURM

tell SLURM to run the script  
(use the same job parameters)

```
sbatch test.sbatch
```

**sbatch** - command

**test.sbatch** - name of the script file

## 2) Write a script and submit it to SLURM

tell SLURM to run the script  
(use the same job parameters)

```
sbatch -A b2015245 -p core -n 1 -t 00:05:00 test.sbatch
```

## Prints to a file instead of terminal slurm-<job id>.out

```
[valent@milou2 temp]$ ll
total 32
-rw-rw-r-- 1 valent valent 209 Oct 22 13:34 test.sbatch
[valent@milou2 temp]$ sbatch test.sbatch
Submitted batch job 11334939
[valent@milou2 temp]$ ll
total 64
-rw-rw-r-- 1 valent valent 31 Oct 22 13:35 slurm-11334939.out
-rw-rw-r-- 1 valent valent 209 Oct 22 13:34 test.sbatch
[valent@milou2 temp]$ cat slurm-11334939.out
this goes to slurm-<jobID>.out
[valent@milou2 temp]$ cat test.sbatch
#!/bin/bash -l

#SBATCH -A b2015245
#SBATCH -p core
#SBATCH -n 1
#SBATCH -t 00:05:00

# go to dir work
cd ~/work
# do something useless
echo "this goes to slurm-<jobID>.out"
echo "Hello, world!" > hello.txt
[valent@milou2 temp]$
```

Shows information about your jobs

`squeue -u <user>`

```
[valent@milou2 temp]$ sbatch test.sbatch
Submitted batch job 11334948
[valent@milou2 temp]$ squeue -u valent
```

JOBID	PARTITION	NAME	USER	ST	TIME	NODES	NODELIST(REASON)
11334948	core	test.sba	valent	CG	0:01	1	m200

`jobinfo -u <user>`

SLURM user guide

go to <http://www.uppmax.uu.se/>

click Support (left-hand side menu)

click User Guides

click Slurm user guide

or just google “uppmax slurm user guide”

link:

<http://www.uppmax.uu.se/support/user-guides/slurm-user-guide/>

100+ programs installed

Managed by a 'module system'

Installed, but hidden

Manually loaded before use

*module avail* - Lists all available modules

*module load <module name>* - Loads the module

*module unload <module name>* - Unloads the module

*module list* - Lists loaded modules

*module spider <word>* - Searches all modules after 'word'

Most bioinfo programs hidden under bioinfo-tools  
Load bioinfo-tools first, then program module

```
[dahlo@kalkyl3 work]$ module load cufflinks/1.2.1
ModuleCmd_Load.c(200):ERROR:105: Unable to locate a modulefile for 'cufflinks/1.2.1'
[dahlo@kalkyl3 work]$ module load bioinfo-tools
[dahlo@kalkyl3 work]$ module load cufflinks/1.2.1
[dahlo@kalkyl3 work]$
```

or

```
[dahlo@kalkyl3 work]$ module load samtools
ModuleCmd_Load.c(200):ERROR:105: Unable to locate a modulefile for 'samtools'
[dahlo@kalkyl3 work]$ module load bioinfo-tools samtools
[dahlo@kalkyl3 work]$
```

```
[dahlo@kalkyl4 work]$ module load bioinfo-tools
[dahlo@kalkyl4 work]$ module avail
```

```

## Summary

All jobs are run on nodes through queue system

A job script usually consists of

- Job settings (-A, -p, -n, -t)

- Modules to be loaded

- Bash code to perform actions

  - Run a program, or multiple programs
