

### **UPPMAX Introduction**

2018-05-21

Valentin Georgiev valentin.georgiev@icm.uu.se

Martin Dahlö martin.dahlo@scilifelab.uu.se

Enabler for Life Science

# **Objectives**

What is UPPMAX what it provides

Projects at UPPMAX

How to access UPPMAX

Jobs and queuing systems

How to use the resources of UPPMAX

How to use the resources of UPPMAX in a good way!

Efficiency!!!

# **Objectives**

### What is UPPMAX what it provides

Projects at UPPMAX

How to access UPPMAX

Jobs and queuing systems

How to use the resources of UPPMAX

How to use the resources of UPPMAX in a good way!

Efficiency!!!

Uppsala Multidisciplinary Center for Advanced Computational Science

http://www.uppmax.uu.se

### computer clusters:

- Rackham, 334(600) computers à 20 cores (128GB RAM)
- Bianca, 200 nodes à 16 cores (128GB RAM)
   (Milou, 208 computers à 16 cores (128GB RAM) 17 with 256, 17 with 512)

~12 PB fast parallel storage

Bioinformatics software

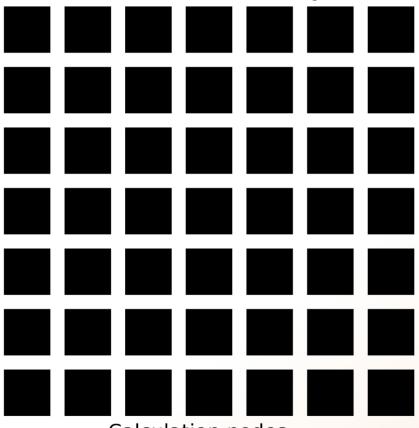

### The basic structure of supercomputer cluster

node = computer

### The basic structure of supercomputer

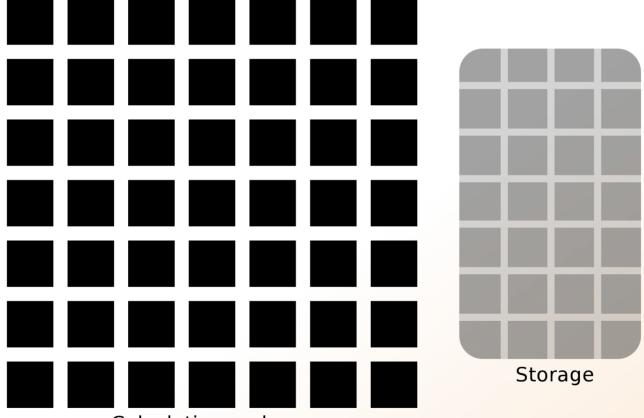

Calculation nodes

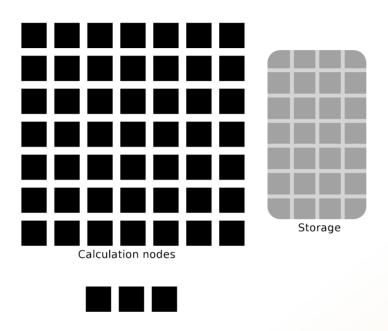

### The basic structure of supercomputer

**UPPMAX** provides

Compute and Storage

# **Objectives**

### What is UPPMAX what it provides

**Projects at UPPMAX** 

How to access UPPMAX

Jobs and queuing systems

How to use the resources of UPPMAX

How to use the resources of UPPMAX in a good way!

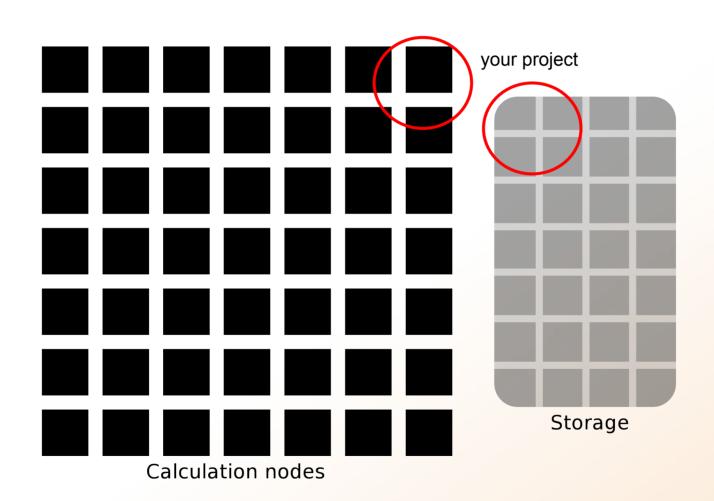

Efficiency!!!

UPPMAX provides its resources via

projects

Resources:

compute
(core-hours/month)

storage (GB/TB)

### two separate projects:

### **SNIC** project:

cluster **Rackham 2000** core-hours/month **128** GB

### **Uppstore project**:

storage system **CREX**1 - 100 TB

### **SNAC Small UPPMAX, 2018**

Start / Rounds / SNAC Small UPPMAX, 2018

### This Round is Open for Proposals

This round is for compute resources on Rackham. All research areas are welcome. Projects with a large storage requirement are prioritised on Rackham.

More information about this round is available at http://snic.se/allocations/small-allocations/.

This round is open for proposals until 2019-01-01 00:00.

Create New Proposal for SNAC Small UPPMAX, 2018

**View Committee Overview** 

#### Resources

	Resource	Centre	Available	<b>Capacity Unit</b>	Note
<b>&gt;</b>	Crex 1	UPPMAX	500	GiB	
•	Rackham	UPPMAX	1 000	x 1000 core-h/month

[valent@rackham1 ~]\$

# SSH

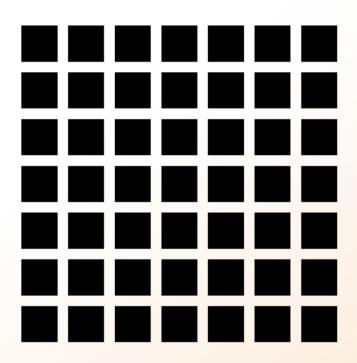

Local computer

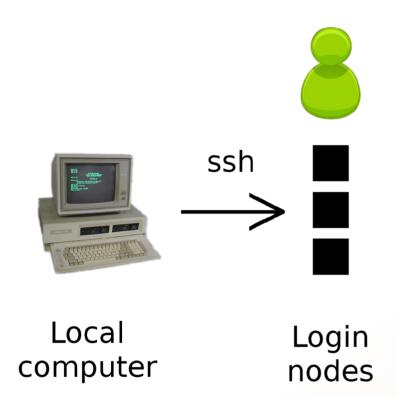

Login nodes

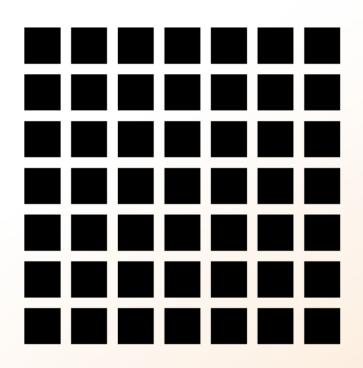

Computation nodes

# SSH

Computation nodes

## How to use UPPMAX

# Login nodes

use them to access UPPMAX never use them to run **jobs** don't even use them to do "quick stuff"

# Calculation nodes

do your work here - testing and running

## How to use UPPMAX

# Calculation nodes

not accessible directly

SLURM (queueing system) gives you access

# **Objectives**

What is UPPMAX what it provides

**Projects at UPPMAX** 

**How to access UPPMAX** 

Jobs and queuing systems

How to use the resources of UPPMAX

How to use the resources of UPPMAX in a good way!

Efficiency!!!

# Job (computing)

From Wikipedia, the free encyclopedia

For other uses, see <u>Job (Unix)</u> and <u>Job stream</u>.

In <u>computing</u>, a **job** is a unit of work or unit of execution (that performs said work). A component of a job (as a unit of work) is called a <u>task</u> or a <u>step</u> (if sequential, as in a <u>job stream</u>). As a unit of execution, a job may be concretely identified with a single <u>process</u>, which may in turn have subprocesses (<u>child processes</u>; the process corresponding to the job being the <u>parent process</u>) which perform the tasks or steps that comprise the work of the job; or with a <u>process group</u>; or with an abstract reference to a process or process group, as in <u>Unix job control</u>.

Read/open files

Do something with the data

Print/save output

Read/open files

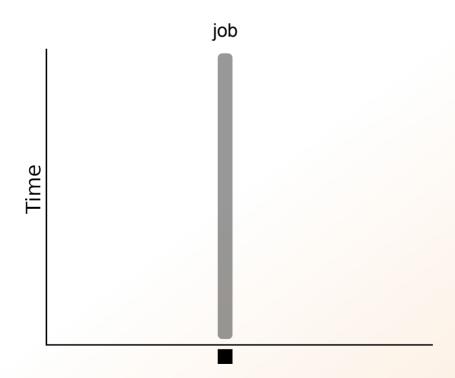

Do something with the data

Print/save output

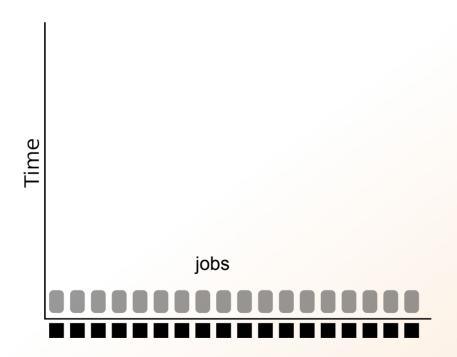

### Standard way of running jobs

## Parallel computing

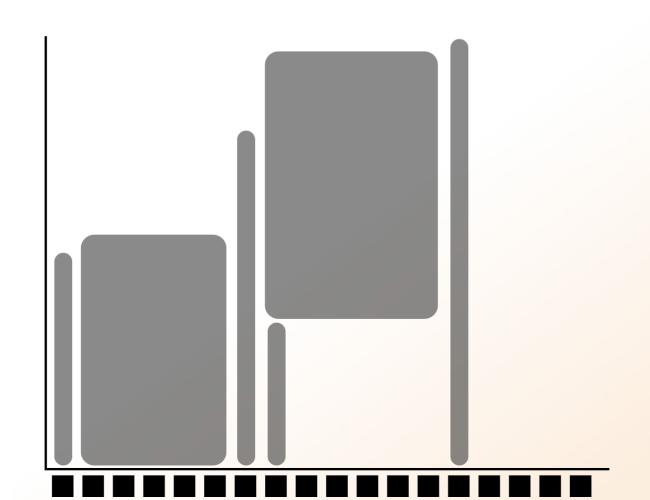

### More users than nodes Need for a queue

nodes - hundreds

users - thousands

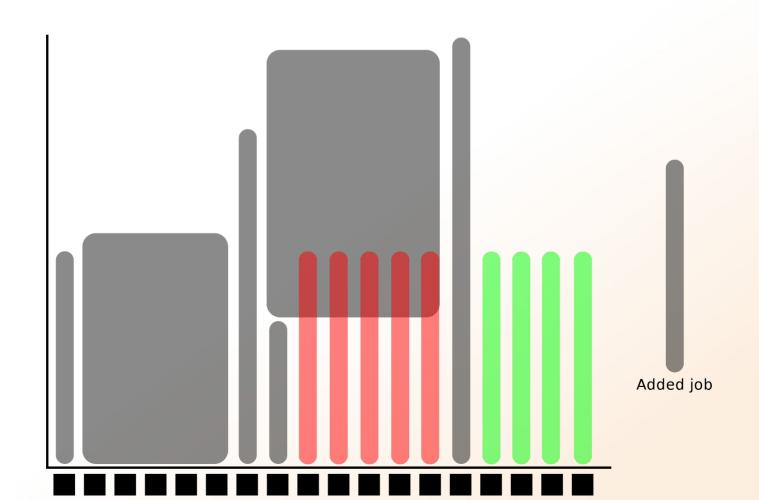

### More users than nodes Need for a queue

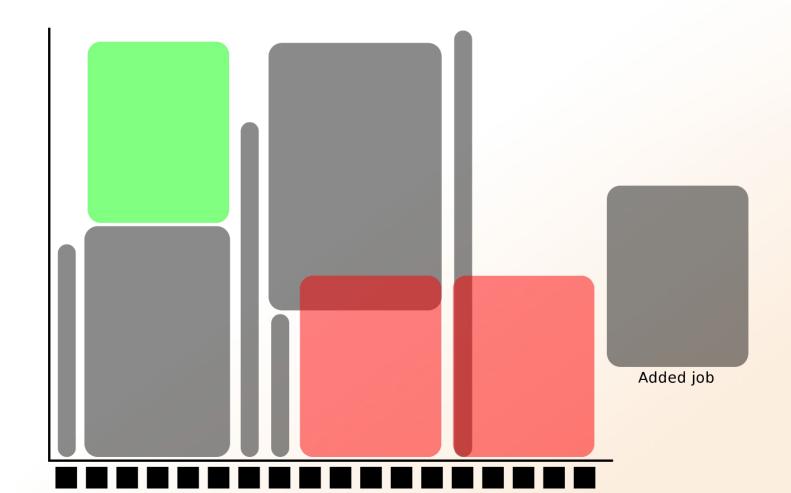

### More users than nodes Need for a queue

### More users than nodes Need for a queue

## SLURM

queue system
workload manager
job queue
batch queue
job scheduler

**SLURM** (Simple Linux Utility for Resource Management) free and open source

# **Objectives**

What is UPPMAX what it provides

**Projects at UPPMAX** 

**How to access UPPMAX** 

Jobs and queuing systems

How to use the resources of UPPMAX

How to use the resources of UPPMAX in a good way!

Efficiency!!!

1) Ask for resource and run jobs manually mainly for testing and small jobs

2)Write a script and submit it to SLURM do the real job

#### 1) Ask for resource and run jobs manually

submit a request for resources

ssh to a calculation node

run programs

1) Ask for resource and run jobs manually submit a request for resources

salloc -A b2015245 -p core -n 1 -t 00:05:00

**salloc** - command mandatory job parameters:

- -A project ID (who "pays")
- -p node or core (the type of resource)
- -n number of nodes/cores
- **-t** time

- -A project IDyou have to be a member
- -p 1 node = 16 cores1 hour walltime = 16 core-hours
- -n number of cores (default value = 1)
- -N number of nodes
- -t format hh:mm:ss default value= 7-00:00:00

jobs killed when time limit reaches - always overestimate ~ 50%

#### Information about your jobs

#### squeue -u <user>

SSH to a calculation node (from a login node)

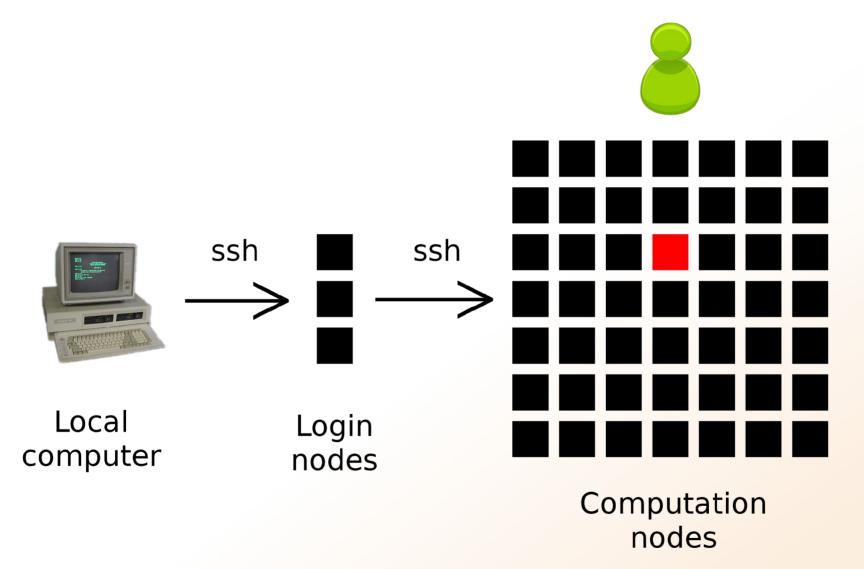

[valent@m164 ~]\$

#### **SLURM**

```
[[valent@milou2 valent]$ salloc -A b2015245 -p core -n 1 -t 00:05:00 &

       Write to support@uppmax.uu.se, if you have questions or comments.
```

You can run programs now!

#### 2)Write a script and submit it to SLURM

put all commands in a text file - script

tell SLURM to run the script (use the same job parameters)

#### 2)Write a script and submit it to SLURM

#### put all commands in a text file - script

```
#! /bin/bash -l
#SBATCH -A g2012157
#SBATCH -p core
#SBATCH -J Template_script
#SBATCH -t 08:00:00
```

job parameters

```
# go to some directory
cd ~/glob

# do something
echo Hello world!
```

tasks to be done

#### 2)Write a script and submit it to SLURM

#### put all commands in a text file - script

```
#! /bin/bash -l
#SBATCH -A g2012157
#SBATCH -p node
#SBATCH -J Template_script
#SBATCH -t 08:00:00
```

```
# go to the correct directory
cd /home/dahlo/glob/work/uppmaxScripts/misc

# run tophat on the data, using 8 cores
tophat -p 8 /bubo/proj/g2012157/indexes/bowtie/hg19 tophat/input/ad12.fq
```

#### 2)Write a script and submit it to SLURM

tell SLURM to run the script (use the same job parameters)

sbatch test.sbatch

#### 2)Write a script and submit it to SLURM

tell SLURM to run the script (use the same job parameters)

sbatch test.sbatch

sbatch - command test.sbatch - name of the script file

#### 2)Write a script and submit it to SLURM

tell SLURM to run the script (use the same job parameters)

**sbatch** -A b2015245 -p core -n 1 -t 00:05:00 test.sbatch

## **SLURM Output**

# Prints to a file instead of terminal slurm-<job id>.out

```
[[valent@milou2 temp]$ 11
total 32
-rw-rw-r-- 1 valent valent 209 Oct 22 13:34 test.sbatch
[[valent@milou2 temp]$ sbatch test.sbatch
Submitted batch job 11334939
[[valent@milou2 temp]$ 11
total 64
-rw-rw-r-- 1 valent valent 31 Oct 22 13:35 slurm-11334939.out
-rw-rw-r-- 1 valent valent 209 Oct 22 13:34 test.sbatch
[[valent@milou2 temp]$ cat slurm-11334939.out
this goes to slurm-<jobID>.out
[[valent@milou2 temp]$ cat test.sbatch
#!/bin/bash -1
#SBATCH -A b2015245
#SBATCH -p core
#SBATCH -n 1
#SBATCH -t 00:05:00
# go to dir work
cd ~/work
# do something useless
echo "this goes to slurm-<jobID>.out"
echo "Hello, world!" > hello.txt
[valent@milou2 temp]$
```

### Squeue

#### Shows information about your jobs

squeue -u <user>

## Take-home messages

- The difference between user account and project
- Login nodes are not for running jobs
- SLURM gives you access to the compute nodes when you specify a project that you are member of
- Use interactive for quick jobs and for testing
- Don not ask for more cores/nodes than your job can actually use
- A job script usually consists of:

Job settings (-A, -p, -n, -t)

Modules to be loaded

Bash code to perform actions

Run a program, or multiple programs
